

Equisetum Plus

EP is a biochemical SiO₂ plant health promoter

High in silica + silicon dioxide 90% - affinity for absorbing and transmitting light

Silica absorbs and activates light in the foliage and beneath the soil surface, it influences plant life by reducing the length of stems and internodes ; EP promotes plant health by hardening leaf tissue + grape skin and is proactive to plant quality; extra root growth activates and oxidizes soil nutrients at lower depth and works in conjunction with the soil micro fauna and –flora. The so called ‘terroir effect’ on the vine, grape and wine make it taste unique and allow the artisan to apply a distinct character.

-ANTIVIGOUR- it magnifies the root growth

Apply 4-6 l/ha

\$ 80/5 litres
